

Because nothing matters more than getting home safe.

When you're working in high-risk environments like mining, construction, or industrial projects, safety isn't a box to tick, it's a way of thinking. Whether it's your first time on-site or your tenth shutdown, staying safe is everyone's responsibility.

Here's what you need to know before stepping onto site:

PPE is non-negotiable:

01.

Personal Protective Equipment (PPE) is your first line of defence. You'll be told exactly what's required, but this usually includes:

- ☐ Steel-cap boots
 - ☐ High-vis clothing
 - ☐ Hard hat
 - ☐ Gloves
 - ☐ Safety glasses
 - ☐ Hearing protection
-

Follow induction protocols:

02.

All sites require a full safety induction before you begin work. It covers:

- ☐ Hazards and risks specific to the site
 - ☐ Emergency response procedures
 - ☐ Incident reporting
 - ☐ Communication rules
 - ☐ Fit-for-work requirements
-

Tip: If you're unsure during the induction, ask. There are no stupid questions when it comes to safety.

Stay alert to hazards

03.

Common site hazards include:

- ☐ Moving machinery
- ☐ Slips, trips and falls
- ☐ Working at heights
- ☐ Chemical exposure
- ☐ Fatigue

Tip: Stay aware of your surroundings. If you see something unsafe, speak up. You're protecting everyone, not just yourself.

Know your emergency procedures

04.

You'll be shown:

- ☐ Muster points
- ☐ Alarm signals
- ☐ First aid stations
- ☐ Fire extinguisher locations
- ☐ Who to report to in an emergency

Tip: In an emergency, stay calm, follow instructions and act fast. Knowing the site layout helps you react quickly.

Use tools & machinery safely

05.

Only operate tools or equipment you've been trained on. Misuse can lead to serious injury or worse.

Tip: Pre-start checks are critical. Never assume a machine is safe just because someone else used it.

Look after yourself (and your mates)

06.

Fatigue, dehydration, and mental burnout can sneak up quickly on site.

- ☐ Stay hydrated
- ☐ Take scheduled breaks
- ☐ Get enough sleep
- ☐ Let someone know if you're not feeling 100%

Tip: Safety is a team game. Look out for the people around you and speak up if something feels off.

Report everything, no matter how small

07.

Near misses, minor injuries, equipment faults, report them all. Fixing small problems early prevents big accidents later.

Tip: Know who your site contact or safety rep is, and how to report an incident straight away.

Final words: Safety is everyone's job

08.

At Mobilize, we back workers who take safety seriously. Every site is different, but the goal's always the same: do the job well and go home safe. Every day.

If you're unsure about anything at your site, contact your Mobilize consultant or the team below for anything else:
